Set up

Packages

```
#|label: packages

# general use
library(tidyverse)
library(janitor)

# file organization
library(here)
```

Data

```
# reading in data
veg <- read_csv(here("data", "veg.csv"))

metadata <- read_csv(here("data", "vp_veg_metadata.csv"))
```

1. Explain your inspiration

I chose Cristina Cametti's "IKEA most popular designers" for my inspiration. This is a reasonable choice for the vegetation dataset because there are a large number of different grass species present on the NCOS mesa, just as there are a large number of different IKEA designers.

Each grass species found on the NCOS Mesa will be represented by its own color. The height of each bar will represent the total count of unique plots that species was observed in. The labels at the end of each bar will describe whether the grass is native or not.

2. Planning

3. Code

4. Describing my process

In 1-3 sentences each, describe:

your process of using someone else's code to create a visualization challenges you encountered as you made your visualization how your visualization differs from visualizations you made in class, for assignments, or for a previous elective
